

# Vbrick Rev Live Streaming, Recording and Content Management for Zoom Meetings

Rev's unique integration allow users to extend investments in Zoom video conference meetings

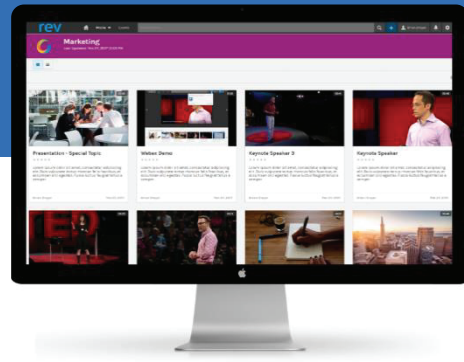

Using Rev's Zoom meeting video conferencing integration, customers can now leverage their Zoom meetings to create video-on-demand content or host large scale live streaming events for internal or external audiences. Rev delivers HD video and content directly to Rev's HTML5 video player which offers users flexibility in choosing from multiple playback layouts on the fly while viewing live or recorded on-demand video content.

Rev extends the reach and scale of a Zoom meeting by providing an enterprise live video distribution solution that is capable of handling the content distribution needs of the largest global enterprises. In addition to extending a Zoom meeting for live video distribution, Rev also offers an enterprise-grade video content management capability for Zoom meeting recordings. Rev offers the ability to easily record Zoom meetings and then secure, organize, enrich and share these recordings.

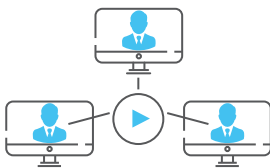

## LIVE STREAMING

## MANAGE RECORDINGS

### REV EXTENDS ZOOM MEETINGS BY:

Maximizing Zoom investments for multiple uses beyond video meetings

Using Rev to convert Zoom meetings into live streams that can be widely distributed for global enterprise audiences

Providing a recording solution for users to create high quality on-demand content used for training, product releases, customer support, etc

Providing a content management system for Zoom recordings capable of granular permissions, encrypted storage, and secure distribution
