

Advanced SCORM Connector

GRANULAR ADMIN CONTROLS AND GREATER FLEXIBILITY TO TAILOR VIDEO FOR EVERY LEARNING EXPERIENCE

Turn Vbrick-hosted video into structured, measurable learning content within your learning management system (LMS). The Vbrick Advanced SCORM Connector builds on Vbrick EVP's native SCORM capabilities to help organizations deliver and manage video-based learning through their existing LMS.

Administrators can develop SCORM-compliant learning packages from centrally managed Vbrick video and track learner progress and completion while keeping source content securely managed in Vbrick.

EXPANDED CONTROLS FOR MORE COMPLEX TRAINING NEEDS

The Advanced SCORM Connector gives administrators greater flexibility to control how learners progress through video-based training, with navigation and playback options that can be configured to support internal training and compliance requirements.

BUILT ON VBRICK'S NATIVE SCORM CAPABILITIES

The Advanced SCORM Connector extends the SCORM capabilities already available with Vbrick EVP, which includes SCORM 2004 package generation, embedded LMS playback, configurable completion thresholds, resume playback, and learner progress and completion tracking.

ADVANCED CONFIGURATION OPTIONS

- **Forward-Seeking Controls:** Control how learners progress through video content by allowing seeking, preventing learners from skipping ahead, or allowing them to rewind to previously viewed content. Playback speed can be managed independently from forward-seeking restrictions.
- **Fullscreen Viewing:** Allow or restrict fullscreen playback within the LMS.
- **Course Control Placement:** Position course controls at the top, sidebar, or bottom of the course experience, or disable them altogether.
- **Playback Control Options:** Display playback controls below the video, use Vbrick EVP player controls, or disable playback controls.
- **Chapter Configuration:** Use existing Vbrick chapters, upload a different chapter structure for the course, or remove chapters from the course experience.
- **Chapter Navigation Controls:** Present chapter navigation in a sidebar, use the standard Vbrick chapter controls, or disable chapter navigation.
- **Video Search & Selection:** Quickly find Vbrick content by title, tags, video ID, or URL when creating a SCORM package.
- **Metadata Settings:** Tailor the title, description, and author displayed for the course in the LMS without changing the source video in Vbrick.

SECURE VIDEO DELIVERY THROUGH YOUR LMS

Extend Vbrick video into LMS learning workflows with:

- OAuth2-based authentication through the Vbrick EVP
- Role-based admin access controls
- Secure token-based session management
- Content access based on Vbrick user permissions

SYSTEM REQUIREMENTS

- Server: Windows (8GB RAM, 4 CPU, 20GB disk)
- Database: MongoDB (local installation)
- Access: HTTPS for LMS administrators
- Optional: Intranet DNS + trusted SSL certificate
