DATA SHEET

Video Archive

Preserve important recordings, tailor reports to your needs, and put video data to work.

Video Archive for the Vbrick Enterprise Video Platform (EVP) helps you preserve on-demand recordings on-premises and understand how viewers engage with on-demand videos and webcasts. Create custom reports for both, automate reporting after live events, and export data as CSV files to bring video metrics into your existing reports and dashboards.

With Video Archive for the Vbrick EVP you can:

Preserve On-Demand Recordings

Download video-on-demand (VOD) recordings to your on-premises environment for retention and offline access. Video Archive skips files it has already downloaded, and you can reupload a saved copy if the original is accidentally deleted from Vbrick.

Create Custom Reports for VOD and Webcasts

For on-demand videos, see who watched required training, track watch time and completion rates, and pinpoint where viewers stop watching. For webcasts, review each attendee's timestamped poll responses and chat activity. Use device, browser, and location details to support audits.

Automate Post-Event Reporting

Schedule webcast reports to run automatically after live events end. Email them as CSV attachments or save them to a location you specify for future analysis or recordkeeping.

Export VOD and Webcast Data for Deeper Analysis

Export VOD and webcast data as structured CSV files for analysis in BI tools such as Power BI or Tableau, or load the files into a data lake. Combine video metrics with other business data to track video adoption, compare webcast engagement, and plan future content.
